Abstracts

According to our (Global Info Research) latest study, the global Wafer In-Process Containers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Wafer Shippers and Carriers are the containers to transfer the wafers safely. The Wafer Shippers and Carriers can be opened and closed with the help of robot to support the existing automation in the wafer transport and shipping. The Wafer Shippers and Carriers must comply with the semiconductor industry standards such as M31, E15.1, E57, E62 and others. The wafer transport box is so designed that it increases the wafer position accuracy along with its operability. The wafer transport box offers removable gasket that provides protection for external contamination. The wafer shipping boxes, or wafer transport box are packaged in horizontal wafer shippers and vertical wafer shippers. The advanced wafer transport boxes offer benefits over the traditional mid-range and low range wafer carriers. Some of them includes precise wafer access, reliable equipment operation with automated handling systems and secured wafer protection against damage and contamination.

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating

the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
