According to our (Global Info Research) latest study, the global Wafer Laminator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The wafer laminator is a device used to laminate wafer surfaces during the semiconductor manufacturing process. The wafer laminator fixes the wafer on a metal frame with wafer adhesive tape to achieve accurate positioning between the wafer and the metal frame, ensuring multiple subsequent processes such as invisible cutting and inspection.

The wafer laminator dissolves the coating material in a solvent and then sprays or rolls the solution onto the wafer surface. It is used to coat protective layers, photoresists or other functional materials to protect the wafer surface, improve electrical properties or create fine structures.
