According to our (Global Info Research) latest study, the global Wafer Laser Stealth Grooving Machine market size was valued at US\$ 67.2 million in 2024 and is forecast to a readjusted size of USD 98 million by 2031 with a CAGR of 5.7% during review period.

A Wafer Laser Stealth Grooving Machine is an advanced piece of equipment used in the semiconductor industry to create precise grooves or cuts on wafers, often as part of the dicing or separation process. Unlike traditional mechanical cutting or sawing methods, laser stealth grooving uses a laser beam to etch or ablate grooves into the wafer surface without completely separating the wafer into individual dies. The process is referred to as 'stealth' because the grooves created by the laser are typically not visible on the wafer's surface, allowing for a controlled and fine cutting process.
