## **Abstracts**

According to our (Global Info Research) latest study, the global Wafer Lift and Elevator Systems market size was valued at US\$ 322 million in 2025 and is forecast to a readjusted size of US\$ 648 million by 2032 with a CAGR of 10.0% during review period.

Wafer Lift and Elevator Systems are crucial precision subsystems in semiconductor manufacturing equipment, responsible for the safe and precise transfer and positioning of wafers inside and outside the process chamber. Like the "hands and joints" of the equipment, they facilitate the transfer of high-cleanliness, high-precision wafers between different workstations, directly impacting chip manufacturing yield and efficiency.

The most typical application of Wafer Lift and Elevator Systems in their core function is pin lifting. After the wafer completes its process by electrostatic or vacuum adsorption onto the stage within the process chamber, the lifting mechanism smoothly lifts the wafer from below, detaching it from the stage surface. A robotic arm can then reach under the wafer to retrieve it and move it to the next processing step.
