According to our (Global Info Research) latest study, the global Wafer Plasma Dicing System market size was valued at US\$ 29.3 million in 2024 and is forecast to a readjusted size of USD 43.3 million by 2031 with a CAGR of 5.3% during review period.

A Wafer Plasma Dicing System is a type of semiconductor dicing equipment that uses plasma technology to precisely cut or dice semiconductor wafers into individual chips or dies. Unlike traditional mechanical dicing methods, which use a rotating blade or laser, plasma dicing utilizes ionized gases (plasma) to etch or cut the wafer. This process provides high precision, minimal mechanical stress, and is especially beneficial for cutting advanced and delicate materials like compound semiconductors, MEMS (Micro-Electro-Mechanical Systems), and 3D stacked wafers.
