## Abstracts

The global Wafer Probe Station market size is expected to reach \$ 2305.9 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

The key manufacturers of wafer probe station include Tokyo Electron Ltd (TEL), Tokyo Seimitsu, FormFactor, MPI and Micronics Japan, etc. The global top three players hold a share of 58%. In terms of production side, Japan is the largest producer, has a share nearly 70 percent, followed by USA and China.

In terms of product type, the fully automatic wafer probe station is the largest segment, occupy for 66%, and in terms of end users, OSAT is the largest consumer, has a share nearly 60%.

This report focus on Wafer Probe Station market. Semiconductor Probing Systems are a well-established tool for testing circuits and devices on silicon wafers, dies, and open microchips. Probe stations allow a user to position electrical, optical or RF probes on a silicon wafer so that the device can be tested. These tests can be simple, such as continuity or isolation check, or sophisticated, including full functional testing of microcircuits. Tests can be run either before or after the wafer has been sawn into individual dies.

Testing at the wafer level allows a manufacturer to test a device multiple times during the production process, which may provide insight as to which process steps are introducing defects into the finished product. It also enables manufacturers to test the dies prior to packaging, which is important in applications where the packaging costs are high relative to the device costs.

This report studies the global Wafer Probe Station production, demand, key manufacturers, and key regions.
