According to our (Global Info Research) latest study, the global Wafer Strip Cleaning Machines market size was valued at US\$ 2663 million in 2024 and is forecast to a readjusted size of USD 3805 million by 2031 with a CAGR of 5.0% during review period.

Wafer strip cleaning machines are high-precision equipment used to remove photoresist, residual contaminants and clean impurities from the wafer surface during the semiconductor manufacturing process. They are one of the core equipment in the wafer post-processing process. It uses chemical solution immersion, spraying, ultrasonic or plasma technology to efficiently strip the residual photoresist film on the wafer. At the same time, it cooperates with a multi-stage pure water rinsing and drying system to ensure that the wafer surface reaches extremely high cleanliness standards and meets the stringent requirements of subsequent processes such as etching and deposition. Wafer strip cleaning machines are widely used in the production processes of logic chips, memory, image sensors, power devices and MEMS devices.
