The walk in test chamber is a relatively large-sized environmental test equipment, allowing testers to enter the test chamber for observation and operation. It can simulate various extreme climatic conditions or specific usage environments by precisely controlling environmental parameters such as temperature, humidity, and pressure. This equipment is used to test products' reliability, stability, adaptability, and other aspects.

The drive in test chamber generally refers to a test chamber with a large interior space and special structural design, allowing test objects to be driven or placed inside through specific methods. Unlike the walk-in test chamber, it focuses more on providing a test environment for large or specially-shaped test objects. It usually features a more open structure and easier access to accommodate the testing needs of entire or large components such as large vehicles, mechanical equipment, etc.

Walk in test chambers are applied in multiple industries, including the aerospace industry, automobile manufacturing, electronics and electrical appliances, pharmaceuticals, and chemicals. Drive-in test chambers are mainly used in the manufacturing and testing stages of automobiles and large machinery.
