A walk in test chamber is a large-scale environmental simulation testing equipment featuring a spacious interior that allows testers to directly enter the chamber to operate and observe the test samples. It can precisely control environmental parameters within the chamber such as temperature, humidity, and air pressure, simulating various climatic conditions and environmental factors. This enables testing and evaluation of a product's performance, reliability, and durability under different environments. Walk-in test chambers come in two structures: welded and modular prefabricated, with sizes typically customizable according to requirements, and options for air-cooled or water-cooled cooling systems.
