The walking beam continuous cleaning oven is an industrial heat treatment equipment that uses a 'walking beam' mechanical structure to achieve continuous material transportation. Its core principle is to gradually push the material into the furnace at a set beat through an alternating lifting and horizontal moving mechanism (beam or bracket), and complete heating, drying, sintering, annealing, degreasing or coating curing processes under controllable temperature, atmosphere and clean conditions. The equipment has the characteristics of efficient continuous production, clean and environmental protection (such as reducing oxidation or volatile residues), high temperature uniformity, and high degree of automation. It is suitable for high-precision or large-scale manufacturing scenarios.
