The global Wall Mounted Induction Hand Dryers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The working principle of the hand dryer is generally that the sensor detects a signal (hand), and the signal is controlled to turn on the heating circuit relay and the blowing circuit relay, and start heating and blowing. When the signal detected by the sensor disappears, the contact is released, the heating circuit and the blowing circuit relay are disconnected, and heating and blowing are stopped.
