Abstracts

According to our (Global Info Research) latest study, the global WAN Edge Infrastructure market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

WAN edge infrastructure enables network connectivity from distributed enterprise locations to access resources in both private and public data centers as well as cloud (as a service). It is typically procured by senior networking leaders within an infrastructure and operations (I&O) organization. This market has evolved from traditional branch routers (often called “customer edge routers” in a Multiprotocol Label Switching [MPLS] implementation), and is undergoing dramatic change, driven by the needs of digital business transformation and the demands of line-of-business managers. The market for branch office wide-area network functionality is shifting from dedicated routing, security and WAN optimization appliances to feature-rich SD-WAN and vCPE platforms. WAN edge infrastructure now incorporates a widening set of network functions, including secure routers, firewalls, SD-WAN, WAN path control and WAN optimization, along with traditional routing functionality.

The Global Info Research report includes an overview of the development of the WAN Edge Infrastructure industry chain, the market status of BFSI (Cloud-based, On-premises), Education (Cloud-based, On-premises), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of WAN Edge Infrastructure.

Regionally, the report analyzes the WAN Edge Infrastructure markets in key regions. North America and Europe are experiencing steady growth, driven by government
