The global Warehouse RFID market size is expected to reach $ 866.9 million by 2030, rising at a market growth of 6.4% CAGR during the forecast period (2024-2030).

Integration with IoT and Industry 4.0: RFID technology is increasingly integrated with Internet of Things (IoT) platforms and Industry 4.0 initiatives to enable real-time tracking, monitoring, and management of warehouse assets, inventory, and operations. RFID sensors and readers are deployed throughout warehouses to automate data capture, improve visibility, and optimize supply chain processes.Adoption of Passive and Active RFID Systems: Both passive and active RFID systems are widely used in warehouse applications, each offering distinct advantages depending on the specific requirements of the operation. Passive RFID tags are cost-effective and suitable for tracking large volumes of inventory items, while active RFID tags provide longer read ranges and battery-powered capabilities for tracking high-value assets and vehicles.Demand for Real-Time Inventory Management: Real-time inventory management is a key driver for RFID adoption in warehouses, enabling accurate and up-to-date tracking of inventory levels, locations, and movements. RFID technology enables automated inventory counts, cycle counting, and stock replenishment, reducing manual labor and minimizing stockouts or overstock situations.
