Abstracts

According to our (Global Info Research) latest study, the global Warm Upsetting Machine market size was valued at US\$ 234 million in 2025 and is forecast to a readjusted size of US\$ 324 million by 2032 with a CAGR of 3.3% during review period.

In 2025, the global production of warm upsetting machines reached 1,136 units, with an average price of approximately US\$200,000 per unit. The global annual production capacity of warm upsetting machines was approximately 1,550 units, with a gross profit margin of approximately 28.2%. A warm upsetting machine (also known as a hot forging machine) is a device used to forge metal materials under specific temperature conditions. It heats the metal material to a specific temperature range below the recrystallization temperature (typically 500?-900?, depending on the material) through electromagnetic induction heating (such as induction furnaces) or gas heating (such as acetylene or liquefied petroleum gas). Then, using the machine's upsetting pressure and molds, it automatically completes processes such as feeding, cutting, stamping, and blanking, causing the metal to undergo plastic deformation under heat, thereby forming the desired parts or blanks, such as spherical, hexagonal, cylindrical, valve body, and other irregularly shaped parts. Warm heading machines combine the advantages of both hot and cold working processes. They utilize the increased plasticity and reduced deformation resistance of metals after heating, while precisely controlling the temperature to avoid problems such as oxidation and grain coarsening caused by overheating. They are suitable for processing small to medium-sized metal parts with complex shapes and certain precision and performance requirements, and are widely used, especially in fasteners and mechanical components. The upstream of warm heading machines includes high-metal bar stock, high-precision machine tool spindles, and servo/hydraulic units; the midstream consists of warm heading machine

manufacturers; and the downstream applications are mainly in the automotive, aerospace, and machinery manufacturing industries.
