Abstracts

The global Waste Gas Treatment market size is expected to reach \$ 270473 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

Waste gas treatment refers to a set of technologies and engineering solutions that use physical, chemical, or biological methods to collect, separate, convert, or remove pollutant gases generated during industrial production, energy utilization, and transportation?such as VOCs, NOx, SOx, particulate matter, and odorous gases?so that emissions comply with environmental regulations.

The waste gas treatment market is strongly driven by environmental regulations. With increasingly stringent emission standards globally?especially in China, Europe, and North America?industrial investment in waste gas treatment systems continues to grow. The market is shifting from standalone equipment to integrated system solutions, with VOC treatment, semiconductor exhaust gas treatment, and marine scrubber systems as key growth areas. Meanwhile, low energy consumption, high efficiency, and intelligent operation and maintenance are becoming central technological trends.
