Abstracts

Waste heat recovery is a process that involves capturing of heat exhausted by an existing industrial process. This waste heat is utilized for other heating applications, including power generation and other applications in different industries. There are numerous ways of recovering waste heat from industries. It is estimated that 20%-50% of industrial energy usage is eventually released as waste heat. The sources of waste heat mainly include discharge of hot combustion gases into the atmosphere and heat transfer from hot equipment exteriors. Waste heat recovery unit is normally a heat exchanger where the heat is recovered from hot streams with high energy content.
