A waste liquid collection tank, also known as a waste liquid storage tank or simply a collection tank, is a container used to collect and store liquid waste materials. It is designed to safely contain and store various types of waste liquids, preventing them from contaminating the environment or causing any harm. These tanks are commonly used in industrial facilities, manufacturing plants, laboratories, and other settings where liquid waste is generated as a byproduct of processes or activities. The waste liquids can include oils, chemicals, solvents, wastewater, and other hazardous or non-hazardous substances. The construction of waste liquid collection tanks is typically robust and resistant to corrosion and leakage. They are often made of materials such as steel, fiberglass, or polyethylene, depending on the nature of the waste liquids being stored and the specific requirements of the application.
