## **Abstracts**

An automotive waste management system establishes a value chain to ensure the collection of waste produced by the automotive manufacturing process and the collection of end-of-life vehicles or obsolete or broken vehicles, which are called automobile scrap. When abandoned, unmanaged end-of-life vehicles can pollute the environment, making it unsuitable for human habitation.

### **SCOPE OF THE REPORT:**

This report focuses on the Waste Management in Automotive in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Increasing production of automobiles is the key driver for the growth of this market. Since the production of automobiles involves the generation of waste materials, many manufacturers are now recycling these waste materials as it helps to resolve supply shortage during the manufacturing process. Automotive waste management involves the reuse and recycling of waste materials like metal, solvents, batteries, plastic, and glass. Recycling of these materials helps vendors to address environmental concerns and also allows them to address the issue of resource depletion.

The worldwide market for Waste Management in Automotive is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
