According to our (Global Info Research) latest study, the global Waste Management & Recycling Service market size was valued at US\$ 393385 million in 2025 and is forecast to a readjusted size of US\$ 486745 million by 2032 with a CAGR of 3.2% during review period.

Waste Management & Recycling Service refers to a comprehensive service covering the collection, sorting, transportation, treatment, disposal, and recycling of municipal solid waste, commercial waste, industrial waste, construction waste, electronic waste, medical waste, and other solid waste streams. The service typically includes waste collection, recycling sorting, recyclable material processing, waste-to-energy, landfill disposal, organic waste composting, hazardous waste treatment, e-waste dismantling, and resource recovery. Its core purpose is to reduce environmental impact, improve resource utilization efficiency, and support cities, enterprises, and public institutions in achieving compliant, efficient, and sustainable waste management.

The Waste Management & Recycling Service market is shifting from traditional collection, transportation, and disposal toward integrated recycling, resource recovery, and low-carbon operation. Driven by stricter environmental regulations, circular economy policies, carbon reduction targets, and improved waste sorting systems, service providers are increasingly focusing on recyclable resource recovery, waste-to-energy, plastic and metal recycling, regulated e-waste dismantling, organic waste utilization, and safe hazardous waste treatment. At the same time, digital dispatching, intelligent sorting, recycling data tracking, carbon emission management, and full-process compliance monitoring are becoming key industry trends, transforming waste management from an end-of-pipe disposal service into a sustainable resource

management solution.
