Abstracts

The global Waste Paper Recycling market size is expected to reach \$ 63750 million by 2032, rising at a market growth of 2.8% CAGR during the forecast period (2026-2032).

Waste paper recycling is the process of mixing used paper with water and chemicals to break it down. This mixture is then chopped up and heated to break it down further into strands of cellulose called pulp or slurry. It is then strained through screens which remove any glue or plastic that may still be in the mixture. Finally it is cleaned, de-inked, bleached, mixed with water and then it can be made into new recycled paper.

Global Waste Paper Recycling key players include Huanjia Group, International Paper, DS Smith, Waste Management, etc. Global top four manufacturers hold a share over 10%. Asia-Pacific is the largest market, with a share about 55%, followed by Europe and North America, both have a share over 35 percent. In terms of product, Corrugated Cardboard is the largest segment, with a share about 50%. And in terms of application, the largest application is Wrapping Paper, followed by Printing-and-Writing Paper, etc.
