According to our (Global Info Research) latest study, the global Waste Recycling Services market size was valued at USD 416050 million in 2023 and is forecast to a readjusted size of USD 517210 million by 2030 with a CAGR of 3.2% during review period.

This report studies the Waste Recycling Services market. Recycling is the process of converting waste materials into new materials and objects. It is an alternative to 'conventional' waste disposal that can save material and help lower greenhouse gas emissions (compared to plastic production, for example). Recycling can prevent the waste of potentially useful materials and reduce the consumption of fresh raw materials, thereby reducing: energy usage, air pollution (from incineration), and water pollution (from landfilling). Recycling is a key component of modern waste reduction and is the third component of the 'Reduce, Reuse, and Recycle' waste hierarchy. Thus, recycling aims at environmental sustainability by substituting raw material inputs into and redirecting waste outputs out of the economic system.

Recyclable materials include many kinds of glass, paper, and cardboard, metal, plastic, tires, textiles, and electronics. The composting or other reuse of biodegradable waste—such as food or garden waste—is also considered recycling. Materials to be recycled are either brought to a collection center or picked up from the curbside, then sorted, cleaned, and reprocessed into new materials destined for manufacturing.

Global Waste Recycling Services key players include Veolia Environnement, Suez Environnement, Waste Management, Republic Services, etc. Global top four manufacturers hold a share about 5%.

USA is the largest market, with a share over 30%, followed by Europe and China, both have a share about 40 percent.
