A waste recycling sorting system, also known as a waste sorting and separation system, is an automated system designed to efficiently sort and separate different types of recyclable materials from mixed waste streams. The primary goal of such a system is to recover valuable materials, reduce the amount of waste sent to landfills or incineration, and promote recycling and resource conservation. Waste recycling sorting systems are typically used in waste management facilities, recycling centers, and material recovery facilities (MRFs).

Waste recycling sorting systems play a vital role in reducing the environmental impact of waste disposal, conserving natural resources, and promoting sustainable waste management practices. The specific design and configuration of these systems can vary depending on the types of materials to be sorted, local recycling goals, and available technology. Automation and advanced sorting technologies have significantly improved the efficiency and accuracy of waste recycling sorting systems, making them essential components of modern waste management infrastructure.
