According to our (Global Info Research) latest study, the global Waste Tire Recycling and Dismantling System market size was valued at US\$ 1751 million in 2025 and is forecast to a readjusted size of US\$ 2976 million by 2032 with a CAGR of 7.8% during review period.

Waste tire recycling and dismantling systems refer to industrial systems that process end-of-life tires through a complete and continuous process for resource recovery. Their core objective is to achieve the efficient separation and reuse of components such as rubber, steel wire, and fibers from tires while meeting environmental and safety requirements. These systems typically integrate key units such as cutting, shredding, crushing, sorting, or pyrolysis, converting whole tires into rubber granules, rubber powder, steel wire, and renewable resources such as pyrolysis oil and carbon black. They are widely used in recycled rubber, road engineering, energy utilization, and municipal solid waste treatment, serving as an important technological carrier for the circular economy and solid waste reduction and resource recovery. In 2025, sales reached 37,000 units, with an average price of US\$46,000, total production capacity of 40,000 units, and a gross profit margin of 33%.
