SCADA is an automated tool that facilitates supervision, analysis, and collection of real time data for generating reports. SCADA remotely monitors and controls a variety of industrial devices and sensors and display the data in a logical and organized fashion to reduce waste and improve efficiency in the manufacturing processes.

Scope of the Report:

Waste water treatment plants depend on reliable operation of SCADA to continuously and safely remove effluent throughout the service area to main station. With the increase in demand for automation in waste water treatment plants, there is a significant rise in the demand for SCADA. In addition, safety of the machinery and data requirement has elevated the demand of SCADA. Integration of SCADA with cloud further fuels the market growth. Introduction of cloud-based application with SCADA helps to ease the data access on multiple electronic devices allowing collaboration of multiple users at the same time. However, factors such as increase in cyber-attacks, management issue with the data generated may hamper the market growth. Growth in infrastructure and development of smart cities in the emerging economies such as China, India, Brazil, and others is expected to open new opportunities for the market players.

The worldwide market for Waste Water SCADA is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
