According to our (Global Info Research) latest study, the global Wastewater Decolorizer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Wastewater decolorizers are generally polyaluminium chloride, and other metal salts with cations, and there are also high-efficiency decolorizers. This kind of decolorizer is an organic polymer with a strong positive charge, with small dosage and high decolorization efficiency. Remove the color that cannot be removed by polyaluminium chloride, and make the final water quality reach an ideal state. The wastewater decolorizer is mainly used for the decolorization of textile, printing and dyeing, ink, leather, rubber, coking, papermaking, pharmaceutical and other wastewater.
