Abstracts

The global Wastewater Decolorizer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Wastewater decolorizers are generally polyaluminium chloride, and other metal salts with cations, and there are also high-efficiency decolorizers. This kind of decolorizer is an organic polymer with a strong positive charge, with small dosage and high decolorization efficiency. Remove the color that cannot be removed by polyaluminium chloride, and make the final water quality reach an ideal state. The wastewater decolorizer is mainly used for the decolorization of textile, printing and dyeing, ink, leather, rubber, coking, papermaking, pharmaceutical and other wastewater.

This report studies the global Wastewater Decolorizer production, demand, key manufacturers, and key regions.
