According to our (Global Info Research) latest study, the global Wastewater Skimmer market size was valued at US$ 889 million in 2025 and is forecast to a readjusted size of US$ 1342 million by 2032 with a CAGR of 6.4% during review period.

In 2025, global Wastewater Skimmer average unit price is around US$ 35,692 per unit, with an estimated production volume of approximately 24,220 units. Gross margin is about 34%, and the average cost is around US$ 23,557 per unit. Production capacity is estimated at approximately 28,000 units. Wastewater Skimmer is a surface solid-liquid separation device used in wastewater treatment systems. It removes floating scum, oil, and suspended solids from the surface of tanks through mechanical scraping, belt conveying, or weir collection, improving downstream treatment efficiency and effluent quality. It is widely used in municipal wastewater treatment plants and various industrial wastewater treatment systems.

At the same time, the technology is evolving toward higher efficiency, lower energy consumption, and continuous automated operation driven by stricter wastewater discharge regulations and increasing demand for water reuse. Modern skimmers increasingly adopt corrosion-resistant materials, modular designs, and intelligent control systems to improve operational stability and reduce maintenance costs over long-term operation.
