Abstracts

The global Wastewater Skimmer market size is expected to reach $ 1342 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

In 2025, global Wastewater Skimmer average unit price is around US$ 35,692 per unit, with an estimated production volume of approximately 24,220 units. Gross margin is about 34%, and the average cost is around US$ 23,557 per unit. Production capacity is estimated at approximately 28,000 units. Wastewater Skimmer is a surface solid-liquid separation device used in wastewater treatment systems. It removes floating scum, oil, and suspended solids from the surface of tanks through mechanical scraping, belt conveying, or weir collection, improving downstream treatment efficiency and effluent quality. It is widely used in municipal wastewater treatment plants and various industrial wastewater treatment systems.

At the same time, the technology is evolving toward higher efficiency, lower energy consumption, and continuous automated operation driven by stricter wastewater discharge regulations and increasing demand for water reuse. Modern skimmers increasingly adopt corrosion-resistant materials, modular designs, and intelligent control systems to improve operational stability and reduce maintenance costs over long-term operation.

This report studies the global Wastewater Skimmer production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Wastewater Skimmer and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and
