Abstracts

According to our (Global Info Research) latest study, the global Wastewater Skimming Equipment market size was valued at US$ 889 million in 2025 and is forecast to a readjusted size of US$ 1342 million by 2032 with a CAGR of 6.4% during review period.

In 2025, global Wastewater Skimmer average unit price is around US$ 35,692 per unit, with an estimated production volume of approximately 24,220 units. Gross margin is about 34%, and the average cost is around US$ 23,557 per unit. Production capacity is estimated at approximately 28,000 units. Wastewater Skimming Equipment refers to specialized systems used in wastewater treatment processes to continuously or intermittently remove floating scum, oil, and suspended solids from the water surface. Through mechanical scraping, belt conveying, rotary collection, or overflow separation, contaminants are removed from the surface to improve downstream treatment efficiency and effluent quality. It is widely used in municipal and industrial wastewater treatment systems.

At the same time, the technology is evolving toward higher efficiency, lower energy consumption, and continuous automated operation driven by stricter wastewater discharge regulations and increasing demand for water reuse. Equipment structures are increasingly modular and corrosion-resistant to adapt to complex industrial wastewater conditions while improving long-term operational stability and maintenance convenience.
