## Abstracts

According to our (Global Info Research) latest study, the global Water-Absorbing Polymer market size was valued at US\$ 14670 million in 2024 and is forecast to a readjusted size of USD 21370 million by 2031 with a CAGR of 5.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Water-Absorbing Polymers are a class of polymer materials that can absorb and retain large amounts of water, typically hundreds or even thousands of times their own weight in water. The most common use of these polymers is as superabsorbent polymers (SAPs), which, through their special chemical structure, can form a network or chain structure that rapidly expands and locks in water when in contact with water. Water-absorbent polymers are widely used in personal care products (such as diapers, sanitary napkins), agriculture, construction, and medicine.
