Abstracts

Water-absorbing resin, also known as superabsorbent polymer (SAP), is a type of hydrogel that has the ability to absorb large amounts of water or other liquids relative to its own mass. It is made up of a cross-linked polymer structure that swells in the presence of water and traps the water molecules within its network of chains. The most common use of water-absorbing resin is in disposable hygiene products like diapers, sanitary pads, and adult incontinence products. It is also used in agriculture for retaining soil moisture and in various industrial applications, such as in absorbent materials for spill cleanup or as a coagulator in wastewater treatment.

According to our (Global Info Research) latest study, the global Water Absorbing Resin market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
