The global Water-and-fertilizer Integrated Irrigation System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Water-and-fertilizer Integrated Irrigation System, also known as WFIS, is an advanced agricultural irrigation system that combines water and fertilizer delivery to crops. It is designed to optimize the use of water and fertilizers, improve crop yields, and reduce environmental impact.

In a WFIS, water and fertilizers are simultaneously supplied to the crop roots in a controlled manner. This system typically consists of several components, including a main water supply line, a fertilizer supply system, a network of distribution pipes, and delivery mechanisms such as drip irrigation or micro-sprinklers.

By integrating water and fertilizer delivery, the WFIS allows farmers to optimize resource use, enhance crop productivity, and improve overall agricultural sustainability. It provides precise control over irrigation and fertilization, leading to better crop quality, increased water and fertilizer use efficiency, and reduced environmental pollution.
