Water-based film-forming resin is a resin that uses water as a solvent or dispersion medium and is usually used in products such as coatings, inks, and adhesives. It forms a tough film through the evaporation of water or water-soluble conversion, providing the protective, decorative, and other functional properties of the coating. Compared with traditional solvent-based resins, water-based film-forming resins have low volatile organic compound (VOC) emissions, are more environmentally friendly, and are more suitable for applications that require low toxicity and low pollution.
