## Abstracts

The global Water Chiller for Injection Molding Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A water chiller for an injection molding machine is a cooling system used to maintain consistent temperatures in the injection molding process. It helps to control and regulate the temperature of the mold and the plastic material during the molding process.

During the injection molding process, molten plastic is injected into a mold cavity to form a desired shape. The injected plastic needs to cool and solidify quickly within the mold to maintain its shape and dimensions before the mold opens and the part is ejected. The water chiller plays a crucial role in this cooling process by removing heat from the mold and the plastic material.
