According to our (Global Info Research) latest study, the global Walk-behind Sweepers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

In this report, walk-behind sweepers are classified into manual, battery power (electrical DC motor) and combustion engine types. A manual sweeper doesn't have a motor, instead its rotating brush is connected to the wheels mechanically. When the operator pushes the sweeper, the rotational movement of the wheels is transmitted to the brush. This type of sweeper is more affordable to buy, but is reserved for small areas. The motor driven walk-behind sweeper has a motor which controls the machine's traction and the rotation of the brushes, it can be equipped with an electric motor powered by batteries or with a combustion engine.
