Abstracts

The global Water Colorimeter market size is expected to reach \$ 203 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

A water colorimeter is a device used in colorimetry that measures the absorbance of particular wavelengths of light by a specific solution. It is commonly used to determine the concentration of a known solute in a given solution by the application of the Beer-Lambert law, which states that the concentration of a solute is proportional to the absorbance. In 2025, Global Water Colorimeter sales are estimated at about 350 k units, with an average ex-works price of 430 US\$/Unit.

The value chain includes LEDs, filters, photodetectors, cuvettes, microprocessors, displays, batteries, reagents and calibration standards upstream; instrument manufacturing and reagent-method development in the middle; and water utilities, wastewater plants, pool testing, environmental monitoring, industrial water treatment, food and beverage, and education labs.

Demand is supported by drinking-water safety, wastewater compliance, pool and commercial water treatment, industrial water management and field testing. Compared with full UV-Vis spectrophotometers, water colorimeters are cheaper, portable, method-preprogrammed and easy to use, while multiparameter functions, Bluetooth/data logging and prepackaged reagents support product upgrades.

This report studies the global Water Colorimeter production, demand, key manufacturers, and key regions.
