## Abstracts

The global Water-cooled Brine Chiller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Water-cooled brine chiller is a type of cooling system that uses water as the cooling medium and brine as the secondary refrigerant. The advantage of using a water-cooled brine chiller is that it provides efficient and effective cooling, especially in applications where the use of water as a cooling medium is preferred or necessary. Additionally, brine as a secondary refrigerant offers good heat transfer properties and can withstand low temperatures without freezing, making it suitable for various cooling requirements. It is commonly used in industrial and commercial applications where large amounts of cooling are required.
