According to our (Global Info Research) latest study, the global Water Cooled Robotic Torch market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A water-cooled robotic torch is a type of welding torch used for automated or robotic welding applications. It is specifically designed to provide efficient cooling for the torch and its components during prolonged and high-intensity welding operations. Water-cooled robotic torches work by circulating water through the torch body to dissipate heat generated during the welding process. The cooling water absorbs the heat from the torch and carries it away, preventing overheating and maintaining the optimal operating temperature.
