The global Water Cooling System for Production Equipment market size is expected to reach \$ 3514 million by 2032, rising at a market growth of 3.5% CAGR during the forecast period (2026-2032).

The water cooling system of production equipment is a thermal management system that uses water as a cooling medium to remove the heat generated by the equipment during operation through circulation, thereby keeping the equipment running within a stable and safe temperature range. The water cooling system has the advantages of high heat conduction efficiency, good temperature control stability, and low noise. It is especially suitable for cooling high-power and high-heat-load equipment. The system can realize intelligent control such as automatic temperature adjustment, flow adjustment, and fault alarm, effectively improving the reliability and service life of equipment operation.
