Abstracts

The global Water-Fed Rod market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Water-Fed Poles are a type of window cleaning equipment that use purified water and a telescopic pole with a brush at the end to clean windows and other surfaces. The purified water is pumped through a hose that runs inside the pole and comes out of the jets on the brush. The brush agitates and rinses the dirt and dust from the glass, leaving it streak-free and spotless when it dries. Water-Fed Poles eliminate the need for using chemicals, squeegees, ladders, or scaffolding, making them safer, faster, and more efficient than traditional methods.
