According to our (Global Info Research) latest study, the global Water Glycol Fire Resistant Hydraulic Fluid market size was valued at US\$ 328 million in 2024 and is forecast to a readjusted size of USD 489 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Water glycol fire resistant hydraulic fluid is a flame-retardant hydraulic medium made of water, ethylene glycol and a variety of special additives (such as lubricants, rust inhibitors, defoamers, etc.). It has excellent flame retardancy and can remain stable under high temperature, high pressure or fire exposure, effectively reducing the risk of fire. In addition, the hydraulic fluid has suitable viscosity, good lubrication properties and chemical stability, which can meet the use requirements of hydraulic equipment systems in metallurgy, machinery, chemical industry and other industries. Due to its environmental protection and safety characteristics, water-glycol fire-resistant hydraulic fluid has become an ideal choice to replace traditional mineral oil hydraulic fluid.
