Water-Guided Laser Processing Solutions refers to a contract or outsourced precision machining service that uses water-jet guided laser technology to cut, drill, slot, dice, or micro-machine customer-supplied materials and parts. In this process, the laser beam is coupled into a hair-thin water jet and guided by total internal reflection, so the service combines the laser's precision with the water jet's cooling, debris-removal, and low-thermal-impact advantages. It is typically used for difficult-to-machine, high-value materials such as semiconductors, ceramics, diamonds, hard metals, composites, and precision medical or aerospace components.
