According to our (Global Info Research) latest study, the global Water Heater Gas Valves market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The water heater gas valve is a multifunctional water storage type electric water heater safety pressure relief valve, which is suitable for electric water heaters and air energy water heaters. When the pressure of the inner tank is too high, the excess pressure is excreted to ensure the life of the inner tank and avoid the occurrence of bladder explosion accidents. When the pressure of the container exceeds the design specification, the safety valve will automatically open to discharge the excessive high pressure in the gas reducer to prevent damage to the container or pipeline.
