## Abstracts

According to our latest research, the global Water Jet Guided Lasers market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Water Jet Guided Lasers (WJGL) is an advanced cutting technology that combines the precision of laser cutting with the benefits of water jet machining. In this system, a laser beam is directed through a thin, high-velocity stream of water, which serves as a waveguide, maintaining the focus and direction of the laser. This combination allows for precise and efficient cutting of various materials, including metals, ceramics, and composites, with minimal thermal damage and reduced material distortion compared to traditional laser cutting. The water jet also helps in cooling the material and removing debris from the cutting area, resulting in cleaner cuts and higher-quality finishes. WJGL is particularly advantageous in applications requiring intricate shapes and fine details, making it popular in industries such as aerospace, automotive, and medical device manufacturing.
