## Abstracts

According to our (Global Info Research) latest study, the global Water Leakage Detector Systems market size was valued at USD 86 million in 2023 and is forecast to a readjusted size of USD 122.8 million by 2030 with a CAGR of 5.1% during review period.

Leaks in offices, hotels, museums, computer rooms, data centers or other commercial buildings can damage property, data, or customer goodwill. Water leak detection can either be done by periodically checking the areas and components of the house's plumbing system or by installing a commercially available water leak detection device. Water leakage detector is a device when installed in facility, then it detects water leak at initial stage and inform user by indicating audible alarm, message etc. Water Leakage Detector consist of leak detection controller Panel and sensor alarms.

Depending on requirement leak detection panel can be single way system of multi-zone system, single way system can protect one area or zone since single way water leak detection controller alarm consists on only one sensor terminal.

While multi-way system can protect multi areas or zones since it consists of more than one sensor terminals. Sensor are actual Leak Detectors, the multi detector model can be have as many as 4-way housing. Depending on nature of leak detection it divided in positioning water leak detection systems and non-positioning water leak detection systems. For the positioning water leak detection systems can detect with exact leakage position, and indicates exact distance on controller panel, while non-positioning water leak detection systems can simply detect leakages only without indicating with actual leakage position.
