The global Water-Lubricated Bearing market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Water lubricated bearings refer to bearings that are used directly in water without the need for any sealing devices. The bearings are lubricated with water and do not require lubricating oil or grease, eliminating the harm of water pollution. Bearings are often used in flowing water, which can effectively control the temperature rise of bearings, resulting in long service life, safety, and reliability. Structurally suitable for horizontal, vertical, and oblique axes.

This report studies the global Water-Lubricated Bearing production, demand, key manufacturers, and key regions.
