According to our (Global Info Research) latest study, the global Water Lubricated Oil-Free Screw Air Compressor market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A Water Lubricated Oil-Free Screw Air Compressor is a type of air compressor that utilizes water as a lubricant instead of traditional oil. This design eliminates the need for oil in the compressor, making it oil-free and reducing potential oil contamination in the compressed air output. In a water lubricated oil-free screw air compressor, the screws that compress the air are coated with a thin film of water. As the screws rotate, they compress the air between them, and the water film creates a seal and helps to cool down the compressed air. This system ensures efficient operation while maintaining a high level of air quality. Currently, typical products on the market include Mitsui Seiki's ZU series, Ingersoll Rand's CompAir's DH series, etc.
