Abstracts

The global Water Mist Cooling System market size is expected to reach \$ 956.6 million by 2029, rising at a market growth of 10.3% CAGR during the forecast period (2023-2029).

In terms of application fields, the scope of use of fire-fighting high-pressure water mist systems will be further expanded. It can be used not only in industrial facilities, such as chemical plants, power equipment, etc., but also in commercial facilities, such as shopping malls, hotels, etc. More importantly, as the public pays increasing attention to environmental protection issues, environmentally friendly and efficient water mist cooling systems will be more widely used in the future.

Water Mist Cooling System is a system that uses high pressure to break water into tiny water droplets to form fine water mist for cooling and fire extinguishing. The working principle of this system is to use the evaporation and heat absorption of fine water mist to quickly absorb the heat generated by the fire source, effectively lowering the temperature and preventing the spread of the fire. At the same time, fine water mist can inhibit the production of pyrolysis gas and reduce the expansion of fire.
