According to our (Global Info Research) latest study, the global Water Mist Nozzle market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A water mist nozzle is a nozzle that produces a fine mist of water droplets for various purposes such as fire suppression, cooling, or dust control. It operates by forcing water through small orifices or special designs to create a high-pressure mist. The small droplets produced by water mist nozzles have a larger surface area, which facilitates efficient cooling and firefighting, as the mist can quickly absorb heat and suffocate the fire.
