Abstracts

The global Water Mist Nozzle market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A water mist nozzle is a nozzle that produces a fine mist of water droplets for various purposes such as fire suppression, cooling, or dust control. It operates by forcing water through small orifices or special designs to create a high-pressure mist. The small droplets produced by water mist nozzles have a larger surface area, which facilitates efficient cooling and firefighting, as the mist can quickly absorb heat and suffocate the fire.
